

Take advantage of the benefits that await
by working outside your office walls!

Try Wildix all without even changing your
phone system!

Enjoy smart working on the fly!

Is your productivity still tied
to the four walls of your office?

**But now, it's possible to pick up
your work from anywhere right away!**

THE WILDIX SOLUTION ALLOWS YOUR USERS TO:

- make/receive calls
- chat internally
- make the presence status visible
- share documents and your screens
- launch videoconferences

**Are you interested in specific devices integrated with
Wildix?**

Ask your certified Wildix Partner for information
about hardware As a Service!
This will let you get the latest tools in tech.

**LEARN ABOUT THE BENEFITS OF
SMART WORKING**

How would your business change if your employees could work from home as well as from the office?

With smart working, employee productivity increases by 15 to 20%

57% of employees who use smart working are more satisfied with their job than those who work only in the office

78% of managers consider telecommuting to be the most effective non-economic incentive to retain talent in their company

You can put your PBX into action right away with Wildix's Cloud solution.

Our system lets you:

Calls (internal/external)

Chat, group chat

Video conference (internal/external)

Screen sharing and file sharing

Real-time presence monitoring Monitor your colleagues' status (on the phone, absent, busy, in a conference) in real time

Mobile working is also the best way to balance family life and work. **It allows for flexibility in case of parental leave and drastically reduces absences caused by illness.**

Not to mention, it saves on office expenses (and CO2 emissions!).

To gain these benefits (and more), **you need a system that lets you work from home as if you were still in the office while providing total security.**

100% FLEXIBILITY

You can add or remove users as needed with our scalable As-a-Service solution

All this comes *without* additional hardware, software, or clients.

Plus, it's all accessible with just a click from your PC's browser or smartphone with 100% total security thanks to the WebRTC technology.
